

MODEL G9743 7"x 12" GEAR HEAD METAL-CUTTING BANDSAW

OWNER'S MANUAL

COPYRIGHT © MARCH, 2006 BY GRIZZLY INDUSTRIAL, INC.
WARNING: NO PORTION OF THIS MANUAL MAY BE REPRODUCED IN ANY SHAPE
OR FORM WITHOUT THE WRITTEN APPROVAL OF GRIZZLY INDUSTRIAL, INC.
#PCBL7711 PRINTED IN TAIWAN

This manual provides critical safety instructions on the proper setup, operation, maintenance and service of this machine/equipment.

Failure to read, understand and follow the instructions given in this manual may result in serious personal injury, including amputation, electrocution or death.

The owner of this machine/equipment is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, blade/cutter integrity, and the usage of personal protective equipment.

The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.

Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically-treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

INTRODUCTION

Foreword

We are proud to offer the Model G9743 7" x 12" Gear Head Metal-Cutting Bandsaw. This machine is part of a growing Grizzly family of fine metalworking machinery. When used according to the guidelines set forth in this manual, you can expect years of trouble-free, enjoyable operation and proof of Grizzly's commitment to customer satisfaction.

We are pleased to provide this manual with the Model G9743. It was written to guide you through assembly, review safety considerations, and cover general operating procedures. It represents our effort to produce the best documentation possible.

The specifications, drawings, and photographs illustrated in this manual represent the Model G9743 as supplied when the manual was prepared. However, owing to Grizzly's policy of continuous improvement, changes may be made at any time with no obligation on the part of Grizzly. For your convenience, we always keep current Grizzly manuals available on our website at www. grizzly.com. Any updates to your machine will be reflected in these manuals as soon as they are complete. Visit our site often to check for the latest updates to this manual!

Contact Info

If you have any comments regarding this manual, please write to us at the address below:

- R. Blade Tracking Controls

SECTION 1: SAFETY

AWARNING

For Your Own Safety, Read Instruction **Manual Before Operating this Machine**

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words which are intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures.

Indicates an imminently hazardous situation which, if not avoided, WILL result in death or serious injury.

AWARNING Indicates a potentially hazardous situation which, if not avoided, COULD result in death or serious injury.

ACAUTION

Indicates a potentially hazardous situation which, if not avoided, MAY result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTICE

This symbol is used to alert the user to useful information about proper operation of the machine.

AWARNING Safety Instructions for Machinery

- 1. READ THROUGH THE ENTIRE MANUAL BEFORE STARTING MACHINERY. Machinery presents serious injury hazards to untrained users.
- 2. ALWAYS USE ANSI APPROVED SAFETY GLASSES WHEN OPERATING MACHINERY. Everyday eyeglasses only have impact resistant lenses, they are NOT safety glasses.
- 3. ALWAYS WEAR AN NIOSH APPROVED RESPIRATOR WHEN OPERATING MACHINERY THAT PRODUCES DUST.

- 4. ALWAYS USE HEARING PROTECTION WHEN **OPERATING** MACHINERY. Machinery noise can cause permanent hearing damage.
- 5. WEAR PROPER APPAREL. DO NOT wear loose clothing, gloves, neckties, rings, or jewelry which may get caught in moving parts. Wear protective hair covering to contain long hair and wear non-slip footwear.
- 6. NEVER OPERATE MACHINERY WHEN TIRED, OR UNDER THE INFLUENCE OF DRUGS OR ALCOHOL. Be mentally alert at all times when running machinery.

AWARNINGSafety Instructions for Machinery

- ONLY ALLOW TRAINED AND PROP-ERLY SUPERVISED PERSONNEL TO OPERATE MACHINERY. Make sure operation instructions are safe and clearly understood.
- KEEP CHILDREN AND VISITORS AWAY.
 Keep all children and visitors a safe distance from the work area.
- MAKE WORKSHOP CHILD PROOF. Use padlocks, master switches, and remove start switch keys.
- 10. NEVER LEAVE WHEN MACHINE IS RUNNING. Turn power OFF and allow all moving parts to come to a complete stop before leaving machine unattended.
- **11. DO NOT USE IN DANGEROUS ENVIRONMENTS.** DO NOT use machinery in damp, wet locations, or where any flammable or noxious fumes may exist.
- 12. KEEP WORK AREA CLEAN AND WELL LIT. Clutter and dark shadows may cause accidents.
- 13. USE A GROUNDED EXTENSION CORD RATED FOR THE MACHINE AMPERAGE. Undersized cords overheat and lose power. Replace extension cords if they become damaged. DO NOT use extension cords for 220V machinery.
- 14. ALWAYS DISCONNECT FROM POWER SOURCE BEFORE SERVICING MACHINERY. Make sure switch is in OFF position before reconnecting.
- 15. MAINTAIN MACHINERY WITH CARE. Keep blades sharp and clean for best and safest performance. Follow instructions for lubricating and changing accessories.
- 16. MAKE SURE GUARDS ARE IN PLACE AND WORK CORRECTLY BEFORE USING MACHINERY.

- 17. REMOVE ADJUSTING KEYS AND WRENCHES. Make a habit of checking for keys and adjusting wrenches before turning machinery *ON*.
- 18. CHECK FOR DAMAGED PARTS BEFORE USING MACHINERY. Check for binding and alignment of parts, broken parts, part mounting, loose bolts, and any other conditions that may affect machine operation. Repair or replace damaged parts.
- 19. USE RECOMMENDED ACCESSORIES.
 Refer to the instruction manual for recommended accessories. The use of improper accessories may cause risk of injury.
- **20. DO NOT FORCE MACHINERY.** Work at the speed for which the machine or accessory was designed.
- 21. SECURE WORKPIECE. Use clamps or a vise to hold the workpiece when practical. A secured workpiece protects your hands and frees both hands to operate the machine.
- **22. DO NOT OVERREACH.** Keep proper footing and balance at all times.
- 23. MANY MACHINES WILL EJECT THE WORKPIECETOWARDTHEOPERATOR. Know and avoid conditions that cause the workpiece to "kickback."
- 24. ALWAYS LOCK MOBILE BASES (IF USED) BEFORE OPERATING MACHINERY.
- 25. BE AWARE THAT CERTAIN MATERIALS MAY CAUSE AN ALLERGIC REACTION in people and animals, especially when exposed to fine dust. Make sure you know what type of dust you will be exposed to and always wear an approved respirator.

AWARNING

Safety Instructions for Metal Cutting Bandsaws

- 1. **BLADE CONDITION.** Do not operate with dull, cracked or badly worn blade. Inspect blades for cracks and missing teeth before each use.
- HAND PLACEMENT. Never position fingers or thumbs in line with the cut. Hands could be crushed in vise or from falling machine components.
- ENTANGLEMENT HAZARDS. Do not operate this bandsaw without blade guard in place. Loose clothing, jewelry, long hair and work gloves can be drawn into working parts.
- **4. BLADE REPLACEMENT.** When replacing blades, make sure teeth face toward the workpiece. Wear gloves to protect hands and safety glasses to protect eyes.
- 5. WORKPIECE HANDLING. Always support the workpiece with table, vise, or some type of support fixture. Flag long pieces to avoid a tripping hazard. Never hold the workpiece with your hands during a cut.
- 6. LOSS OF STABILITY. Unsupported workpieces may jeopardize machine stability and cause the machine to tip and fall which could cause serious injury.
- 7. **POWER INTERRUPTION.** Unplug machine after power interruption. Machines without magnetic switches can start up after power is restored.

- 8. FIRE HAZARD. Use EXTREME CAUTION if cutting magnesium. Using the wrong cutting fluid will lead to a chip fire and possible explosion.
- CUTTING FLUID SAFETY. Always follow manufacturer's cutting-fluid safety instructions. Pay particular attention to contact, contamination, inhalation, storage and disposal warnings. Spilled cutting fluid invites slipping hazards.
- 10. ATTENTION TO WORK AREA. Never leave a machine running and unattended. Pay attention to the actions of others in the area to avoid unintended accidents.
- 11. MAINTENANCE/SERVICE. All inspections, adjustments, and maintenance are to be done with the power *OFF* and the plug pulled from the outlet. Wait for all moving parts to come to a complete stop.
- 12. HEARING PROTECTION & HAZARDS. Noise generated by blade and workpiece vibration, material handling, and power transmission can cause permanent hearing loss over time and interfere with communication and audible signals.
- **13. HOT SURFACES.** Contact with hot surfaces from machine components, ejections of hot chips, swarf and workpiece can cause burns.

AWARNING

No list of safety guidelines can be complete. Every shop environment is different. Like all machines there is danger associated with the Model G9743. Accidents are frequently caused by lack of familiarity or failure to pay attention. Use this machine with respect and caution to lessen the possibility of operator injury. If normal safety precautions are overlooked or ignored, serious personal injury may occur.

SECTION 2: CIRCUIT REQUIREMENTS

110/220V Operation

AWARNING

Serious personal injury could occur if you connect the machine to the power source before you have completed the set up process. DO NOT connect the machine to the power source until instructed to do so.

Amperage Draw

The Model G9743 features 110/220V motor that is prewired for 110V and draws the following amps under maximum load:

Motor Draw at 110V	['] 23	Amps
Motor Draw at 220\	/ 11.5	Amps

Circuit Requirements

We recommend connecting this machine to a dedicated circuit with a verified ground, using the circuit breaker size given below. Never replace a circuit breaker with one of higher amperage without consulting a qualified electrician to ensure compliance with wiring codes. If you are unsure about the wiring codes in your area or you plan to connect your machine to a shared circuit, you may create a fire hazard—consult a qualified electrician to reduce this risk.

110V Circuit Breaker	.25	Amps
220V Circuit Breaker	.15	Amps

Wiring for 220V

The Model G9743 can be rewired to operate on a 220V power source. The motor must be rewired according to the wiring diagram on the motor label. The wiring configuration can also be found on the inside of the motor wire cover, as well as on **Page 39.**

Plug Type

The Model G9743 comes prewired with a NEMA 5-15 plug. If you wish to rewire the motor to 220V you will need the following 220V plug (see **Figure 2** for an example):

220V Plug & Receptacle 6-15

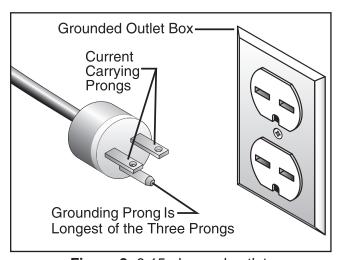

Figure 2. 6-15 plug and outlet.

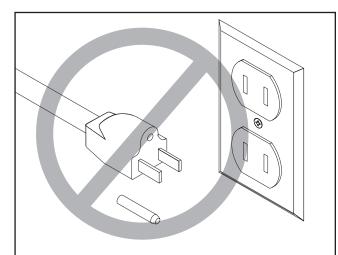

Grounding

In the event of an electrical short, grounding reduces the risk of electric shock. The grounding wire in the power cord must be properly connected to the grounding prong on the plug; likewise, the outlet must be properly installed and grounded. All electrical connections must be made in accordance with local codes and ordinances.

AWARNING

Electrocution or fire could result if this machine is not grounded correctly or if your electrical configuration does not comply with local and state codes. Ensure compliance by checking with a qualified electrician!

ACAUTION

This machine must have a ground prong in the plug to help ensure that it is grounded. DO NOT remove ground prong from plug to fit into a two-pronged outlet! If the plug will not fit the outlet, have the proper outlet installed by a qualified electrician.

Extension Cords

We do not recommend the use of extension cords. Instead, arrange the placement of your equipment and the installed wiring to eliminate the need for extension cords.

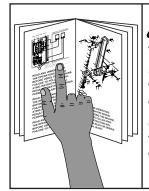

If you find it absolutely necessary to use an extension cord at 110V with your machine:

- Use at least a 10 gauge cord for 110V and 14 gauge cord for 220V that does not exceed 50 feet in length!
- The extension cord must also contain a ground wire and plug pin.
- A qualified electrician MUST size cords over 50 feet long to prevent motor damage.

SECTION 3: SET UP

Set Up Safety

AWARNING

This machine presents serious injury hazards to untrained users. Read through this entire manual to become familiar with the controls and operations before starting the machine!

WARNING

Wear safety glasses during the entire set up process!

WARNING

The Model G9743 is a heavy machine. DO NOT over-exert yourself while unpacking or moving your machine—get assistance.

Items Needed for Set Up

The following items are needed to complete the set up process, but are not included with your machine:

De	scription	Qty
•	Wrench 12mm	1
•	Wrench 14mm	1
•	Safety Glasses (for each person)	1
•	An Assistant	1
•	Phillips Head Screwdriver #2	1

Unpacking

The Model G9743 was carefully packed when it left our warehouse. If you discover the machine is damaged after you have signed for delivery, please immediately call Customer Service at (570) 546-9663 for advise.

Save the containers and all packing materials for possible inspection by the carrier or its agent. Otherwise, filing a freight claim can be difficult.

When you are completely satisfied with the condition of your shipment, you should inventory the contents.

Inventory

After all the parts have been removed from the box, you should have the following items:

Во	x Contents (Figure 3)	Qty
Ме	tal-Cutting Bandsaw (not shown)	1
A.	Wheels	1
B.	Wheel Brackets	1
C.	Chip Screen	1
D.	Work Stop Rod	1
	Work Stop	
F.	Axles	2
На	rdware Bag	
	—Hex Bolts %-16 x 5%	2
	—Flat Washers %	2
	—Cotter Pins 3 x 25	2
	—Hex Bolts 5/16-18 x 11/2	6
	—Hex Nuts 5/16-18	
	—Flat Washers 5/16	12
	—Wire Nuts	
	Thumb Sorow	

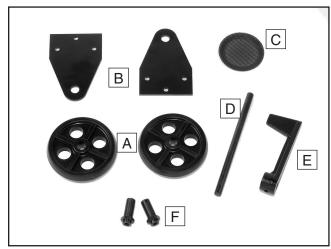

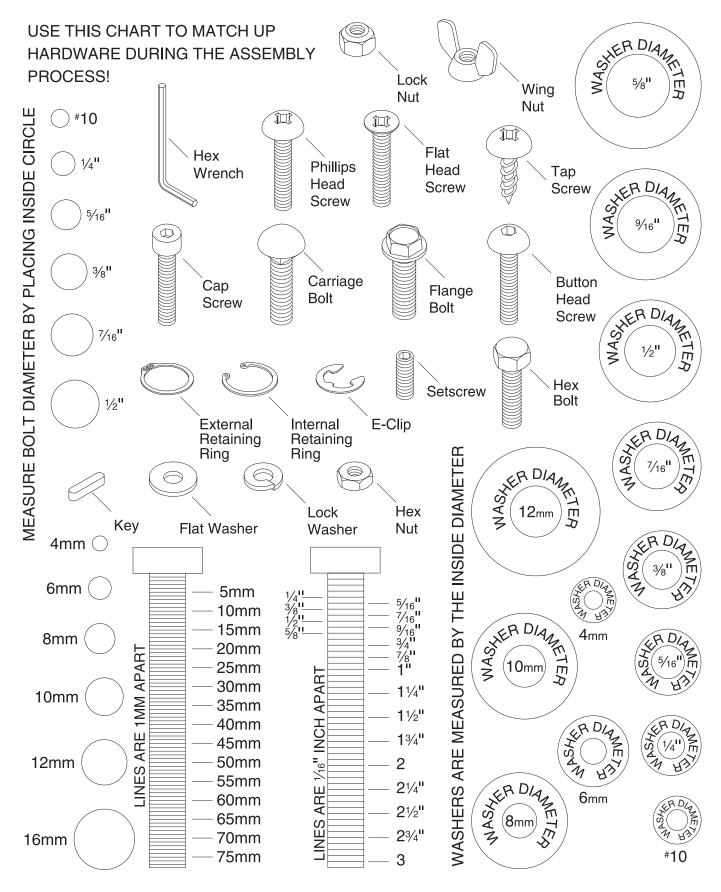

Figure 3. Loose parts inventory.

Hardware Recognition Chart

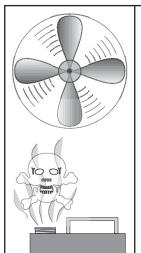

Clean Up

The unpainted surfaces are coated with a waxy oil to protect them from corrosion during shipment. Remove this protective coating with a solvent cleaner or citrus-based degreaser such as Grizzly's G7895 Degreaser. To clean thoroughly, some parts may need to be removed. For optimum performance from your machine, make sure you clean all moving parts or sliding contact surfaces that are coated. Avoid chlorine-based solvents, such as acetone or brake parts cleaner, as they may damage painted surfaces should they come in contact. Always follow the manufacturer's instructions when using any type of cleaning product.

WARNING

Gasoline and petroleum products have low flash points and could cause an explosion or fire if used to clean machinery. DO NOT use gasoline or petroleum products to clean the machinery.

CAUTION

Many of the solvents commonly used to clean machinery can be toxic when inhaled or ingested. Lack of ventilation while using these solvents could cause serious personal health risks or fire. Take precautions from this hazard by only using cleaning solvents in a well ventilated area.

Site Considerations

Floor Load

The weight and footprint size for your machine is located in the machine data sheet. Most floors are suitable for your machine. Some residential floors may require additional reinforcement to support both the machine and operator.

Working Clearances

Consider existing and anticipated needs, size of material to be processed through each machine, and space for auxiliary stands, work tables or other machinery when establishing a location for your new machine. See **Figure 4** for the minimum working clearances.

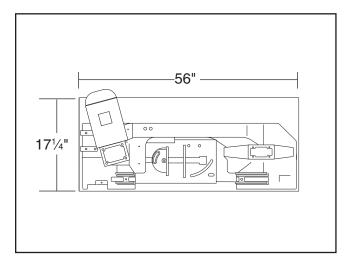

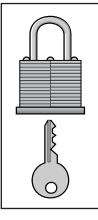

Figure 4. Minimum G9743 working clearances.

ACAUTION

Unsupervised children and visitors inside your shop could cause serious personal injury to themselves. Lock all entrances to the shop when you are away and DO NOT allow unsupervised children or visitors in your shop at any time!

Shipping Bracket

A shipping bracket has been installed on the bandsaw to protect the alignment of the head-stock during shipment. After removal, store the bracket in a safe place until you need to move or ship the bandsaw in the future.

To remove the shipping bracket:

1. Use a 12mm wrench to remove the top hex bolt and flat washer, use a 14mm wrench to loosen the bottom hex nut and remove the shipping bracket shown in **Figure 5**.

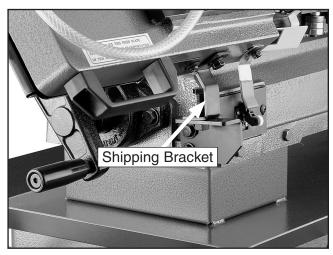

Figure 5. Removing shipping bracket.

Work Stop

Components and Hardware Needed:	Qty
Work Stop	1
Work Stop Rod	1
Thumb Screw	1

To install the work stop:

1. Insert the work stop rod through the hole in the base shown in **Figure 6** and lock in place with the hex bolt.

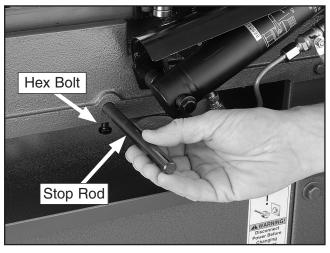

Figure 6. Installing work stop rod.

Thread the thumb screw into the work stop and slide the work stop over the rod as shown in Figure 7.

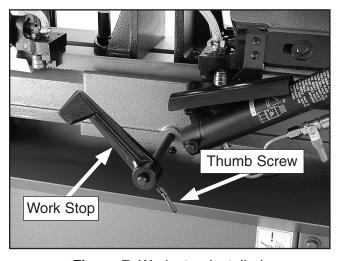

Figure 7. Work stop installed.

3. Tighten the thumbscrew.

Wheels

The wheels may be installed to make it easier to move the G9743 bandsaw.

Components and Hardware Needed:	Qty
Wheels	2
Wheel Brackets	2
Axles	2
Hex Bolts %-16 x 5%	2
Flat Washers 3/8	2
Cotter Pins 3 x 25	2
Hex Bolts 5/16-18 x 11/2	6
Hex Nuts 5/16-18	6
Flat Washers 5/16	12

To install the wheels:

1. Align a wheel bracket with the frame mounting holes and secure with three 5/16-18 x 1½ hex bolts, three hex nuts, and six flat washers, as shown in **Figure 8.**

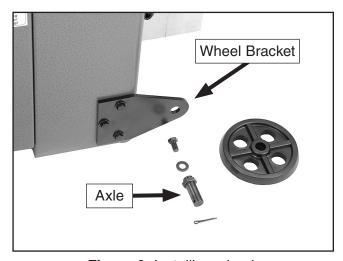

Figure 8. Installing wheel.

- 2. Insert the threaded end of each axle into the wheel bracket and secure with a \[^3\kights_{-16} x \[^5\kights_{-16} x \]^5\[\text{hex bolt and a flat washer.}
- 3. Slide a wheel over the axle.
- **4.** Insert a cotter pin into the axle, and spread the pin to secure the wheel.
- 5. Install the opposite wheel, repeating **Steps** 1–4.

Chip Screen

The chip screen is designed to prevent chips and cut-offs from entering the coolant tank.

Components and Hardware Needed:	Qty
Chip Screen	1

To install the chip screen:

1. Place the chip screen into the opening shown in **Figure 9**.

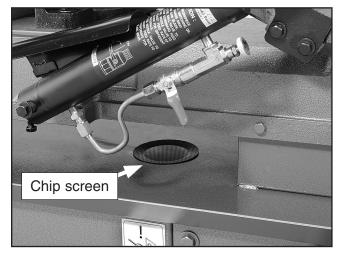

Figure 9. Chip screen installed.

Test Run

AWARNING

Projectiles thrown from the machine could cause serious eye injury. Wear safety glasses during assembly and operation.

Starting the machine:

- 1. Read the entire instruction manual.
- **2.** Make sure all tools and foreign objects have been removed from the machine.
- **3.** Put on safety glasses and secure loose clothing or long hair.
- 4. Connect the bandsaw to power.
- 5. Raise the bandsaw and close the feed ON/ OFF valve to keep the saw in place (see Figure 10).

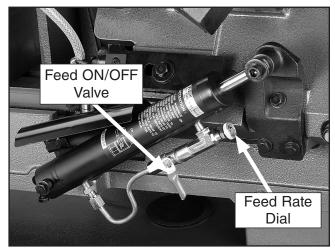

Figure 10. Feed ON/OFF valve and feed rate dial.

6. Start the bandsaw while keeping your finger near the ON/OFF switch at all times during the test run (Figure 11). The bandsaw should run smoothly with little or no vibration. **Note:** If the EMERGENCY STOP button is pressed, it needs to be twisted until it pops out or the bandsaw will not start.

- —If you suspect any problems, immediately stop the bandsaw and correct before continuing.
- —If you need any help with your bandsaw call our Tech Support at (570) 546-9663.

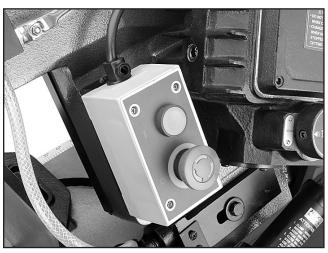

Figure 11. ON/OFF switch.

Recommended Adjustments

The adjustments listed below have been performed at the factory. However, because of the many variables involved with shipping, we recommend that you at least verify the following adjustments to ensure accurate cutting results.

Step-by-step instructions on verifying these adjustments can be found in **SECTION 7: SERVICE ADJUSTMENTS.**

Factory adjustments that should be verified:

- 1. Blade Tracking (Page 33).
- 2. Squaring the Blade (Page 34).
- 3. Blade Guide Bearings (Page 35).

SECTION 4: OPERATIONS

Operation Safety

AWARNING

Damage to your eyes, lungs, and ears could result from using this machine without proper protective gear. Always wear safety glasses, a respirator, and hearing protection when operating this machine.

WARNING

Loose hair and clothing could get caught in machinery and cause serious personal injury. Keep loose clothing and long hair away from moving machinery.

NOTICE

If you have never used this type of machine or equipment before, WE STRONGLY REC-OMMEND that you read books, trade magazines, or get formal training before beginning any projects. Regardless of the content in this section, Grizzly Industrial will not be held liable for accidents caused by lack of training.

Vise

The vise on the Model G9743 has a positive locking feature that improves productivity by opening the vise jaws just enough to slide material through.

To use the positive lock:

- 1. Raise the headstock above the workpiece and lock in place.
- 2. Place the vise handle in the half open position (45°). See **Figure 12**.
- **3.** Place the workpiece between the jaws and turn the handwheel until the rear jaw makes contact with the workpiece.
- **4.** Push the positive lock handle down to the lock position (0°). As you do this you will feel the handle tighten against the workpiece (see **Figure 12**).
- 5. To loosen the workpiece, lift the vise handle to the fully open position (90°).
- 6. Slide the stock to the workstop for your next cut. The vise position will not change as long as you don't change the position of the vise jaws with the handwheel.

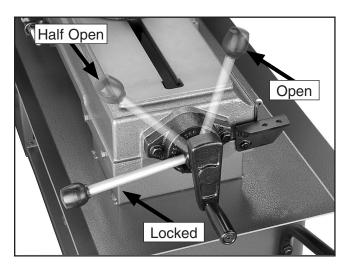

Figure 12. Positive locking handle positions.

To adjust the angle on the vise:

- 1. Loosen the lock nut with a 3/4" hex wrench.
- Use the scale as a guide to set your angle or use a machinist square to square the vise to the blade as shown in Figure 13.
- **3.** Tighten the lock nut.

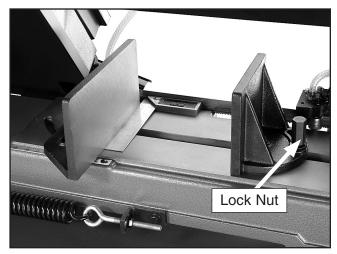

Figure 13. Squaring vise to blade.

- **4.** Loosen the lock nut in **Figure 14** on the opposite jaw so the jaw can float, and match the angle of the workpiece.
- **5.** Tighten the vise against the workpiece.

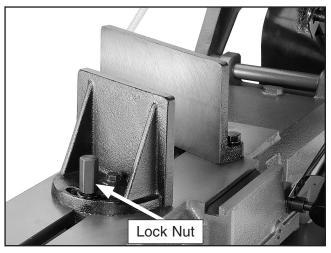

Figure 14. Vise jaw lock-nut.

Blade Speed

The Model G9743 has these three blade speeds: 148, 216, and 282 FPM.

NOTICE

DO NOT change speeds when the motor is running. Wait for the bandsaw to come to a complete stop or you will damage the gears and you will void your warranty.

To change blade speeds:

- TURN THE BANDSAW OFF AND ALLOW IT TO COME TO A COMPLETE STOP.
- 2. Determine the best speed for your cut. The table in **Figure 15** is provided as a rough guideline. Material thickness, type of blade used and if cutting fluid is used, will factor into the correct speed selection. As a general rule, add 15% when using cutting fluid.

Material	Feet Per Minute (FPM)
Tool, Stainless, & Alloy Steels, Cast Iron	148
Medium to High Carbon Steels, Iron, Hard Brass or Bronze	216
Aluminum and Plastics	282

Figure 15. Blade speed table.

Continued on next page —

3. With the saw turned *OFF*, rotate the speed control knob to the desired position (see Figure 16).

Figure 16. Speed control knob.

Blade Selection

The Model G9743 uses $104\frac{1}{2}$ x 1" bandsaw blades.

Selecting the right blade for the job depends on a variety of factors, such as the type of material being cut, hardness of the material, machine capability, and operator technique.

We suggest you do some research for your specific situation so you get the best blade to match your needs.

Grizzly is proud to offer a variety of selections that can be found in the current catalog and in **SECTION 5: ACCESSORIES** on **Page 26**.

Cutting Fluid System

This bandsaw has a built-in cutting fluid system that extends the life of your bandsaw blades by lowering the temperature of the blade and workpiece and washing away chips.

See **Cutting Fluid** on **Page 22** for more information.

To use the cutting fluid system:

- 1. Thoroughly clean and remove any foreign material that may have fallen inside the reservoir during shipping.
- 2. Place the filter screen and drain tube in the reservoir as shown in **Figure 17**.
- 3. Fill the reservoir to the "high" mark with your chosen cutting fluid solution.

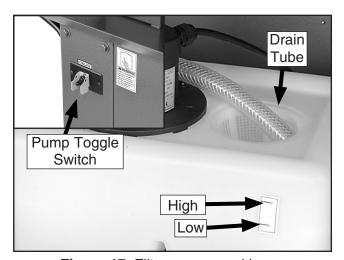

Figure 17. Filter screen and hose.

AWARNING

FIRE HAZARD! DO NOT cut magnesium when using oil-water solutions as a cutting fluid! Always use a cutting fluid intended for magnesium. The water in the solution will cause a magnesium-chip fire.

4. Adjust the valve on the coolant hose to control the flow of coolant (see Figure 18). Make sure that the pressure is not so high that coolant spills on the floor and creates a slipping hazard.

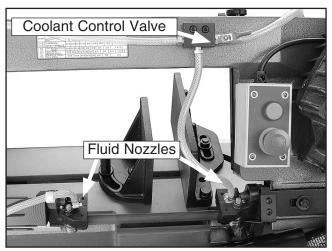

Figure 18. Coolant control valve.

Turn the pump toggle switch ON before making your cut.

NOTICE

Keep the tray chip screen clear so coolant can recycle to the pump reservoir. NEVER operate the pump with the reservoir below the low mark or you will over-heat the pump and void your warranty!

Cutting Fluid

While simple in concept and function, many issues must be taken into account to find and use the correct cutting fluid. Always follow all product warnings and contact the fluid manufacturer for unanswered questions.

Use the selections below to choose the appropriate cutting fluids:

- For cutting low alloy, low carbon, and general-purpose category metals with a bi-metal blade—use a water soluble cutting fluid.
- For cutting stainless steels, high carbon, and high alloy metals, brass, copper and mild steels—use "Neat Cutting Oil" (commonly undiluted mineral oils) that have extreme pressure additives (EP additives).
- For cutting cast iron, cutting fluid is not recommended.

Remember: Too much flow at the cutting fluid nozzle will make a mess and can make the work area unsafe; and not enough fluid at the cut will heat the blade, causing the blade teeth to load up and break.

AWARNING

BIOLOGICAL AND POISON HAZARD! Use proper personal protection equipment when handling cutting fluid and dispose by following federal, state, and fluid manufacturer requirements to properly dispose of cutting fluid.

Blade Guides

The blade guides should be as close to the workpiece as possible. This will help ensure straight cuts by keeping the blade from twisting and drifting off the cut line.

To adjust the blade guides:

1. Loosen the knob shown in **Figure 19** and slide the rear blade guide as close to the workpiece as possible, then tighten the knob.

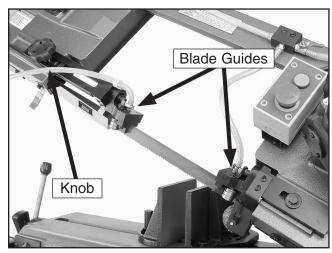

Figure 19. Blade guides.

Feed Rate

The speed at which the saw blade will cut through a workpiece is controlled by blade type, feed rate, and feed pressure.

Note: If a lubricant is used on the cut, the feed rate can be increased by approximately 15%.

To set the feed rate:

- 1. Raise the headstock to the maximum height to remove spring tension. Close the ON/OFF valve to lock the headstock in place.
- 2. Using a 14mm wrench, adjust the feed pressure tension spring. Tighten enough to remove play but not enough to apply tension to the spring (see **Figure 20**).

Note: This spring adjustment is an initial setting. Depending on cutting circumstances, you will have to fine-tune the feed pressure with this adjustment. Increasing the spring tension will reduce the feed pressure.

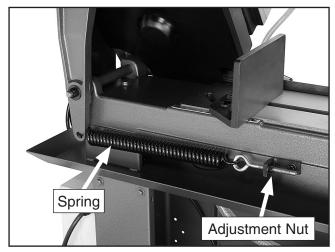

Figure 20. Spring tension adjustment.

- 3. Clamp the workpiece in the table vise.
- **4.** Close the feed ON/OFF valve **Figure 21**, to lock the headstock and blade a few inches above the workpiece.

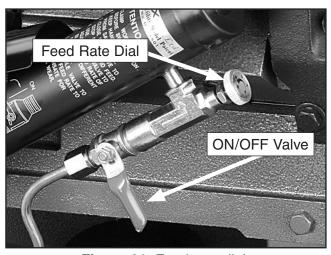

Figure 21. Feed rate dial.

- With the correct saw blade and blade speed selected, turn the saw and lubricant pump ON.
- 6. Slowly rotate the feed rate dial clockwise to a slow feed rate until the saw begins to cut the workpiece (see **Figure 21**).
- 7. Observe the chips that exit the cut, and increase or decrease the feed rate according to the chip characteristics (see **Figure 22**).

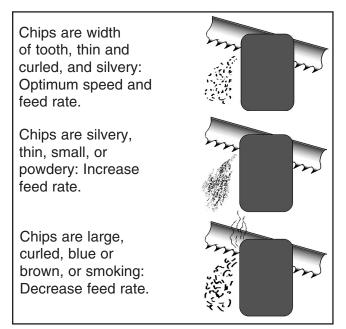

Figure 22. Reading chip characteristics.

Operation Tips

The following tips will help you safely and effectively operate your bandsaw, and help you get the maximum life out of your saw blades.

Tips for horizontal cutting:

- Use the work stop to quickly and accurately cut multiple pieces of stock to the same length.
- Clamp the material firmly in the vise jaws to ensure a straight cut through the material and use the positive lock to speed production.
- Let the blade reach full speed before engaging the workpiece. Never start a cut with the blade in contact with the workpiece (see Figure 24).
- Chips should be curled and silvery. If the chips are thin and powder like, increase your feed rate.
- Burned chips indicate a need to reduce your blade speed.
- Wait until the blade has completely stopped before removing the workpiece from the vise, and avoid touching the cut end—it could be very hot!
- Support long pieces so they won't fall when cut, and flag the end to alert passers-by of potential danger.
- Adjust the blade guides as close as possible to the workpiece to minimize side-to-side blade movement.
- Use coolant when possible to increase blade life.

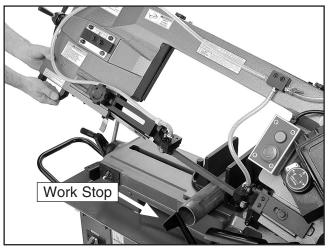

Figure 24. Proper starting position.

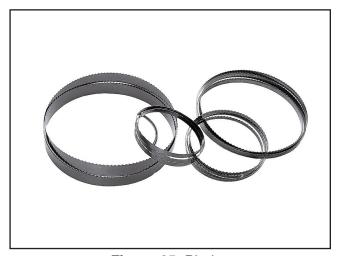

Figure 25. Blades

H5408—Blade Tensioning Gauge

The Blade Tensioning Gauge ensures long blade life, reduced blade breakage, and straight cutting by indicating correct tension. A precision dial indicator provides you with a direct readout in PSI.

Figure 26. H5408 Blade Tensioning Gauge.

H5405—Lenox[®] Lube Tube[™]

Lenox[®] Lube Tube[™] is a stick lubricant designed to prevent heat buildup. Apply it directly to the blade to improve overall blade life and productivity. Can be used on ferrous and non-ferrous metals. Biodegradeable, non-toxic, and non-staining 14.5 oz tube.

Figure 27. Lenox[®] Lube Tube[™].

G7897—Machining Fluid This biostable, soluble oil for heavy-duty machining applications provides stable pH peprformance which resists bacteria and fungal growth, rancidity and odors. Can be used in light or heavy machining Mix with water, 1:21 for general use or 1:11-1:16 for heavy use.

SECTION 6: MAINTENANCE

AWARNING

Always disconnect power to the machine before performing maintenance. Failure to do this may result in serious personal injury.

Schedule

For optimum performance from your machine, follow this maintenance schedule and refer to any specific instructions given in this section.

Daily Check:

- Loose mounting bolts.
- Damaged saw blade.
- Worn or damaged wires.
- Any other unsafe condition.
- · Clean after each use.
- Proper blade tension.

Monthly Check:

- · Lubricate vise screw.
- Check gear box fluid level.

Annual Check:

 Change gear box oil (every three months if being used daily).

Cleaning

Cleaning the Model G9743 is relatively easy. After using your bandsaw, remove excess chips by sweeping and remove any excess coolant with a dry towel.

Lubrication

Before applying lubricant to any area, wipe the area clean to avoid contamination. Lubricate the vise screw shown in **Figure 32** with general purpose grease.

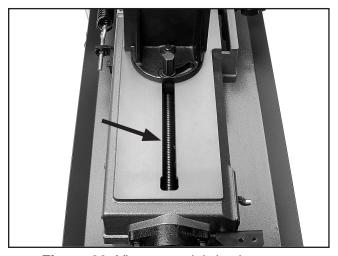

Figure 32. Vise screw lubrication area.

Change gear box oil by removing the drain plug on the underside of the gear box (out of view) in **Figure 33** and drain the gearbox. Replace the drain plug and refill through the fill cap with SAE-30 oil. Fill to the mark indicated on the sight glass.

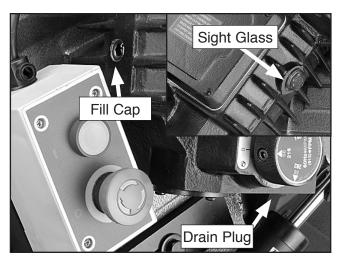

Figure 33. Gear box lubrication.

Maintenance Log

Date	Approximate Hours Of Use	Maintenance Performed

SECTION 7: SERVICE

Review the troubleshooting and procedures in this section to fix your machine if a problem develops. If you need replacement parts or you are unsure of your repair skills, then feel free to call our Technical Support at (570) 546-9663.

Troubleshooting

Motor & Electrical

Symptom	Possible Cause	Possible Solution
Machine does not start	1. E-Stop button pressed.	Twist E-Stop button until it pops out.
or a breaker trips.	2. Plug/receptacle is at fault or wired incorrectly.	2. Test for good contacts; correct the wiring.
	3. Start capacitor is at fault.	3. Test/replace if faulty.
	4. Wall fuse/circuit breaker is blown/tripped.	4. Ensure correct size for machine load; replace weak breaker.
	5. Motor connection wired incorrectly.	5. Correct motor wiring connections.
	6. Power supply is at fault/switched OFF.	6. Ensure hot lines have correct voltage on all legs and main power supply is switched ON.
	7. Motor ON/OFF switch is at fault.	7. Replace faulty ON/OFF switch.
	8. Wiring is open/has high resistance.	8. Check for broken wires or disconnected/cor-
		roded connections, and repair/replace as necessary.
	9. Motor is at fault.	9. Test/repair/replace.
Machine stalls or is	Wrong blade for the workpiece material.	1. Use blade with correct properties for your type
underpowered.		of cutting.
	2. Wrong workpiece material.	2. Use metal with correct properties for your type of cutting.
	3. Feed rate/cutting speed too fast for task.	3. Decrease feed rate/cutting speed.
	4. Blade is slipping on wheels.	4. Adjust blade tracking and tension.
	5. Low power supply voltage.	5. Ensure hot lines have correct voltage on all legs.
	6. Motor bearings are at fault.	6. Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement.
	7. Plug/receptacle is at fault.	7. Test for good contacts; correct the wiring.
	8. Motor connection is wired incorrectly.	8. Correct motor wiring connections.
	9.Motor has overheated.	9.Clean off motor, let cool, and reduce workload.
	10.Motor is at fault.	10.Test/repair/replace.
Machine has vibration	1. Motor fan is rubbing on fan cover.	1. Replace dented fan cover; replace loose/dam-
or noisy operation.		aged fan.
	2. Blade is at fault.	2. Replace/resharpen blade.
	3. Gearbox is at fault.	3. Rebuild gearbox for bad gear(s)/bearing(s).
	4. Wrong blade & too slow of speed.	4. Change blade and or speed.

Bandsaw Operations

SYMPTOM	POSSIBLE CAUSE	CORRECTIVE ACTION
Machine is loud when cutting or bogs down in the cut.	Excessive feed rate. The blade TPI is too great, or the material is too coarse.	 Refer to Feed Rate on Page 24, or Changing Blade Speed on Page 20, and adjust as required. Refer to Blade Selection on Page 21 and adjust as required.
Blades break often.	 Blade is not tensioned correctly. The workpiece is loose in the vise. 	Check to see that blade is not excessively tight or too loose. Clamp the workpiece tighter, or use a jig to hold the workpiece.
	3. The feed or cut speed is wrong.4. The blade TPI is too great, or the material is too coarse.	 Refer to Feed Rate on Page 24, or Changing Blade Speed on Page 20, and adjust as required. Refer to Blade Selection on Page 21, and adjust as required.
	5. The blade is rubbing on the wheel flange.6. The bandsaw is being started with	 5. Refer to Blade Tracking on Page 33, and adjust as required. 6. Start bandsaw and then slowly lower the headstock
	the blade resting on the workpiece.The guide bearings are misaligned, or the blade is rubbing on the wheel flange.	by setting the feed rate. 7. Refer to Blade Tracking on Page 33 , or Blade Guides on Page 23 , and adjust as required.
	The blade is too thick, or the blades are of low quality.	8. Use a higher quality blade.
Blade dulls prematurely.	 The cutting speed is too fast. The blade TPI is too coarse. 	 Refer to Changing Blade Speed on Page 20, and adjust as required. Refer to Blade Selection on Page 21, and adjust
	The blade feed pressure is too light.	as required.3. Refer to Feed Rate on Page 24, and adjust as required.
	4. The workpiece has hard spots, welds, or scale is on the material.5. The blade is twisted.6. The blade is slipping on the wheels.	 Increase the feed pressure, and reduce the cutting speed. Replace the blade. Refer to Blade Tension on Page 34, and adjust as required.
Blade wears on one side.	 The blade guides are worn or misadjusted. The blade guide slide bracket is loose. 	 Refer to Blade Guides on Page 23 and replace or adjust. Tighten the blade guide bracket.
	The wheels are out of alignment.	3. Refer to Blade Tracking on Page 33 , and adjust as required.
Teeth are ripping from the blade.	The feed pressure is too heavy and the blade speed is too slow; or the blade TPI is too coarse for the workpiece.	Refer to Blade Selection on Page 21 and decrease the feed pressure. Refer to Feed Rate on Page 24, and adjust as required.
	 The workpiece is vibrating in the vise. The blade gullets are loading up with chips. 	2. Re-clamp the workpiece in the vise, and use a jig if required.3. Use a coarser-tooth blade.
The cuts are crooked.	The reside bearings are set of	Refer to Feed Rate on Page 24, and adjust as required.
	The guide bearings are out of adjustment, or too far away from the workpiece.	Refer to Blade Guides on Page 23 and replace or adjust. Refer to Blade Tanaian on Page 24 and adjust as
	3. The blade tension is low.4. The blade is dull.	3. Refer to Blade Tension on Page 34, and adjust as required.4. Refer to Changing the Blade on Page 32 and
	5. The blade speed is wrong.	replace the blade. 5. Refer to Changing Blade Speed on Page 20 , and adjust as required.

Blade Change

Blades should be changed when they become dull, damaged, or when you are using materials that require a blade of a certain type or tooth count.

To change the blade on the bandsaw:

- 1. UNPLUG THE BANDSAW!
- 2. Raise the headstock of the bandsaw to the highest position, close the Feed ON/OFF valve, and remove the wheel access cover.
- **3.** Remove the blade guards.
- **4.** Loosen the tension handle in **Figure 34** and slip the blade off of the wheels.

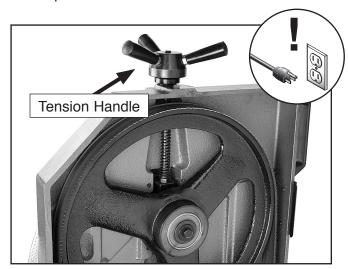

Figure 34. Tension handle and blade.

4. Install the new blade through both blade guide bearings, as shown in **Figure 35**, and around the bottom wheel.

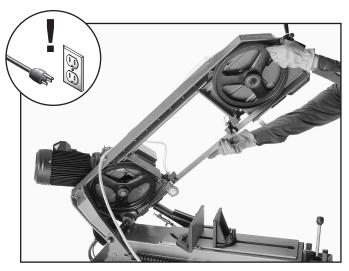

Figure 35. Installing blade.

5. Hold the blade around the bottom wheel with one hand and slip it around the top wheel with the other hand, keeping the blade between the blade guide bearings.

Note: It is sometimes possible to flip the blade inside out, in which case the blade will be installed in the wrong direction. Check to make sure the blade teeth are facing toward the workpiece, as shown in **Figure 36**, after mounting on the bandsaw. Some blades will have a directional arrow as a guide.

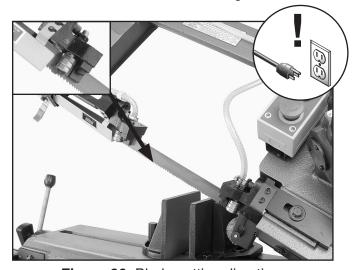

Figure 36. Blade cutting direction.

6. When the blade is around both wheels, adjust the position so the back of the blade is against the shoulder of the wheels.

- Tighten the tension handle as tight as necessary so the blade will not slip on the wheels during start up.
- **8.** Put the gearbox in neutral by moving the gear change knob between two of the speed positions.
- **9.** Spin the wheel by hand until the blade resumes the previous tracking.
- **10.** Put the gearbox back in gear.
 - —If the tracking needs to be adjusted, refer to the **Tracking** procedure in the next section.
 - If the tracking is fine, proceed to Blade Tension on Page 34.

Blade Tracking

The blade tracking has been properly set at the factory. The tracking will rarely need to be adjusted if the bandsaw is used properly.

To adjust the blade tracking on the bandsaw:

- 1. UNPLUG THE BANDSAW!
- **2.** Raise the bandsaw to the highest position and close the feed rate ON/OFF valve.
- **3.** Remove both blade guide assemblies.
- **4.** Open the wheel access cover.
- 5. Loosen, but do not remove the lower cap screw in the blade wheel tilting mechanism (Figure 37).

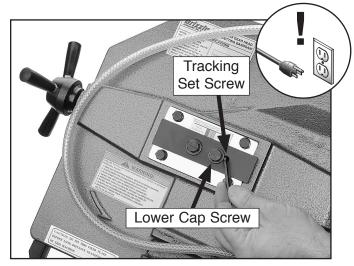

Figure 37. Adjusting tracking set screw.

- 6. Relax the blade tension.
- 7. Adjust the tracking set screw with a 4mm hex wrench as shown in **Figure 37**, then tighten the cap screw loosened in **Step 4**.
 - —Tightening the set screw will move the blade closer to the shoulder of the wheel.
 - Loosening the set screw will move the blade away from the shoulder.
- **8.** Tension the blade.
- **9.** Put the gearbox in neutral by moving the gear change knob between two of the speed positions and spin the wheel by hand.
 - —If the blade tracks along the shoulder of the wheel (without rubbing), the blade is tracking properly and this adjustment is completed.
 - —If the blade drifts away from the shoulder of the wheel or hits the shoulder, repeat Steps 4-7.
- **10.** Replace the blade guard and blade guide assemblies
- **11.** Adjust the blade guides as needed. Refer to **Blade Guide Bearings** on **Page 35.**

Blade Tension

Proper blade tension is essential to long blade life, straight cuts, and efficient cutting. The Model G9743 features a blade tension indicator to assist you with blade tensioning.

Two major signs that you do not have proper blade tension are: 1) the blade stalls in the cut and slips on the wheels, and 2) the blade frequently breaks from being too tight.

To tension the blade on the bandsaw:

- **1.** Make sure the blade is tracking properly.
- 2. UNPLUG THE BANDSAW!
- **3.** Slide the blade guides as far apart as they will go, then tighten them down again.
- **4.** Turn the tension handle clockwise to tighten the blade.
- Tighten the blade until the tension indicator moves into the green or center section of the indicator.
- 6. To fine tune blade tension, use a blade tensioning gauge, like the one found in **SECTION 5: ACCESSORIES** on **Page 26**. Please follow the instructions included with your gauge and the blade manufacturer's recommendations on blade tension.

Squaring the Blade

It is always a good idea during the life of your saw to check and adjust this setting. This adjustment will improve your cutting results and extend the life of your blade.

To square the blade to the bed of the table:

- UNPLUG THE BANDSAW!
- **2.** Lower the head of the bandsaw all the way until it contacts the horizontal stop.
- 3. Place a square on the table bed and against the edge of the blade (**Figure 38**), and check different points along the length of the table between the blade guides.
- 4. Loosen the cap screw shown in Figure 38, and rotate the blade guide until the blade is vertical to the bed, then tighten the cap screws.

Note: Both blade guides can be adjusted to achieve the results you want.

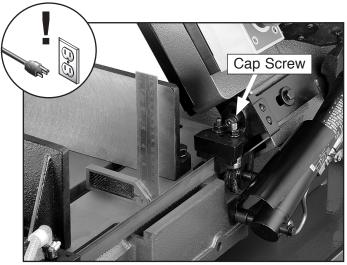

Figure 38. Squaring the blade.

Blade Guide Bearings

The blade guide bearings come adjusted from the factory and the need for adjustment should rarely occur. Uneven blade wear and crooked cuts may be the result of improper adjustment. Each bearing assembly has an eccentric bushing that allows the distance between the blade and bearings to be adjusted. The bearings are secured in place by a hex nut and a lock washer as shown in **Figure 39**.

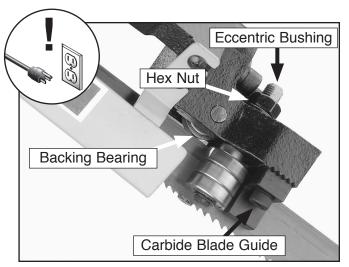

Figure 39. Blade guide adjustments.

To adjust the blade guide bearings:

- UNPLUG THE BANDSAW!
- **2.** Raise the bandsaw to the highest position and close the feed rate ON/OFF valve.
- 3. Loosen the hex nut that secures the eccentric bushing.
- **4.** Adjust the eccentric bushing position to achieve the desired clearance. The bearing and blade should make light contact or have a clearance of 0.001"-0.002".
- **5.** Tighten the nut to lock the eccentric bushing and bearing in position.
- Adjust the other eccentric blade guide bearing in the same manner. The backing bearing is not adjustable and will make light contact with the blade.
- Adjust the carbide blade guides so they make the same contact with the blade as the bearings.

The safety labels on this machine warn and indicate how to protect the operator or bystander from machine hazards. The machine owner MUST maintain the original label location and readability. If a label is removed or becomes unreadable, REPLACE the label before using the machine. For new labels, contact Grizzly Industrial Inc. at (570) 546-9663 or techsupport@grizzly.com.

WARRANTY AND RETURNS

Grizzly Industrial, Inc. warrants every product it sells for a period of **1 year** to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly's sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly's liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a "Return Number," which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.

Thank you again for your business and continued support. We hope to serve you again soon.
